

# Lexis Red® Briefing

App version 3.19 – released 6 February 2023

### Important updates in Lexis Red 3.19

#### Overview

- New version popup update for Windows
- New publication info on publication screen and iModal
- 'Share' menu hidden when user selects Index tab in publication

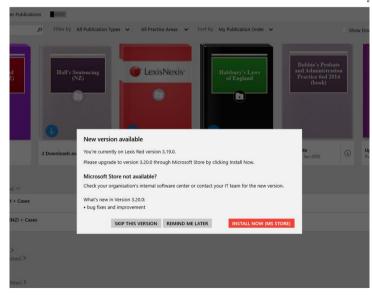

App version 3.19 will be available on Windows, iOS and Mac but not Android as we are making significant upgrades to the Android app's architecture.

### Update to new version popup notification on Windows

**Problem statement:** When a new version of the app is released, a pop up appears directing the user to the MS Store to download the latest version of the app. However, the notification does not cater to users whose access to the MS Store has been blocked by their organisation.

**Solution:** The wording of the new version pop up has been updated to let users know that they should check their organisation's software centre or contact their IT team for the new version of the app if their access to the MS Store is blocked.

## New publication info on publication screen and iModal

Problem statement: Customers wanted more meaningful publication information and labels.

**Solution:** The publication details appearing on the publication screen and iModal have been updated and customised for each content type.

# New publication info on publication screen and iModal

New publication dates for AU/NZ publications

Looseleafs

**Latest update**: Date of the latest editorial update to the publication. This can be compared to the latest update date on Lexis Advance and the Print versions of the same title.

**Updated on Red** (cover) and **Last updated on Lexis Red** (iModal): Date this publication was last published to Lexis Red. This is a system date and may bear no relationship to the currency of the publication. Publications are re-published to Lexis Red for various reasons including editorial updates and for technical reasons.

Books + Legislation

**Published**: Publish date of this edition of the book. This can be compared to the published date on Lexis Advance and the Print versions of the same book.

All content types

Downloaded: Date user downloaded the update to their device.

### 'Share' menu hidden when user selects Index tab in publication

**Problem statement:** Some Mac/iOS users, unaware that selecting 'share/save to PDF' delivers the contents of the tab they were last browsing, shared/saved the 'Index' tab rather than the contents tab as they intended.

Solution: To avoid confusion, the share menu is now hidden when a user selects the Index tab on any device.
